

# AI Labyrinth: Narrative Engine Project Summary

## 1. THE STORY: AI LABYRINTH

A recently laid-off software engineer accepts a remote job from a mysterious tech company and relocates to a secluded home. His assigned "office" is a shed deep in the woods, accessible only through a maze-like path that changes daily. As the job unfolds, strange AI-generated coworkers mimic his memories, and the boundaries between simulation and reality blur. The story becomes interactive and personalized as the reader makes subtle choices through phone tilts, scrolling behavior, and decision branches. Themes include isolation, surveillance, digital manipulation, and false memories. Unique features include: - Live-generated prose - Tilt-driven branching - Memory-altering scroll behavior - Set in 2003–2006 to evoke early-internet eeriness without smartphones

## 2. STRUCTURE: HOW THE STORY UNFOLDS

The story is broken into modular scenes. Each scene contains: - scene\_id - scene\_prompt (goal for the LLM) - theme (interactive mechanic, like tilt or scroll lock) - decision\_points (if applicable) - LLM\_output (Claude/Mistral generated prose) Chapters may subtly evolve on re-reads, introducing branching logic that simulates a maze. Emotional tone (loneliness, seduction, panic) drives path shifts.

## 3. TECH STACK

- LLM Generation: Claude Sonnet API (or Mistral) - Orchestration: LangChain or LangGraph - Frontend: Streamlit (for now), React for production - Tilt Detection: JavaScript DeviceOrientation API (mobile only) - User State: Redis or lightweight SQLite - Optional Backend: FastAPI - Optional Prompt Testing: LangSmith - Authentication: Minimal login for tracking story progress

### ■ MVP to Build Today

- Chapter 1 rendered from scene prompt via Claude - Paragraph-by-paragraph reveal (dark UI, no scroll-ahead) - Mobile tilt detection for branch control - State tracking (progress, choice) in localStorage - Save basic user info (optional email) - Reminder: Story rewrites itself slightly on scroll back

### ■■ UX & Ethics Notes

- Opt-in personalization only - Accessibility toggle to disable tilt - Replayability through alternate emotional branches - Design tone: Familiar like terminal or command line, but unstable
